

CRM & Sales Pipeline SaaS

Portfolio Project - Short Feature Description

Overview: SalesFlow CRM is a full-stack web application for managing potential customers, companies, contacts, leads, deals, follow-ups, and sales performance. A lead can be qualified, converted into a deal, moved through a visual sales pipeline, and finally marked Won or Lost.

Workflow: Potential Customer -> Lead -> Qualified -> Deal -> Proposal -> Negotiation -> Won/Lost -> Dashboard

Core Features

- User registration, login/logout, session authentication, bcrypt password hashing, and profile update.
- Role-based access for Admin, Manager, and Sales users with Admin team-user management.
- Company and contact CRUD with PostgreSQL/TypeORM relationships.
- Lead management with source, value, status, company/contact, assignment, and lead-to-deal conversion.
- Deal management with value, expected close date, owner, stage, and deal-history tracking.
- Drag-and-drop pipeline: New, Contacted, Proposal, Negotiation, Won, and Lost.
- Notes plus calls, meetings, emails, and follow-up activities with due dates and completion status.
- Dashboard metrics for leads, deals, revenue, pipeline counts, upcoming activities, and recent deals.
- Search, filtering, newest/oldest sorting, and pagination on major lists.
- Stored notifications with optional Pusher real-time alerts and optional email notifications.

Technology Stack

Layer	Technology
Frontend	Next.js , React , TypeScript, Tailwind CSS, Axios
Backend	NestJS , TypeScript, TypeORM, express-session, bcrypt
Database	PostgreSQL
Optional	Pusher and Nodemailer/Gmail SMTP
